

## Clock-Advance Decision Tracker

Track each time you advance the clock during CCS practice. Review your decisions and outcomes to refine pacing.

Case Phase	Action Taken	Time Advanced	Expected Result	Actual Result	Notes
Initial Stabilization	Ordered O <sub>2</sub> , IV, monitor	5 min	Vitals stable	BP improved	Good sequence
Diagnostic Phase	Sent labs, imaging	30 min	Results pending	CBC returned, imaging delayed	Reassess timing
Treatment Adjustment	Started antibiotics	4 hrs	Fever down	Still febrile	Consider coverage broaden

Tip: Avoid idle time—advance only when all actionable orders are placed. Review idle segments in analytics.
